COMMUNITY PARKS: LEVEL OF SERVICE

Community Park:

A community park serves a broader purpose than a neighborhood park. The purpose of these parks is for meeting community-based active, structured recreation needs as well as preserving unique landscapes and open spaces. The design is for organized activities and sports, although individual and family activities are also encouraged. Generally, the size of a community park ranges between approximately ten to 50 acres.

Community parks serve a much larger area, and are often accessed by vehicle, bicycle, public transit, or other means so the walking distance requirement is not critical. Adequate capacity to meet community needs is critical, and requires more support facilities such as parking and restrooms. Typical amenities might include sports fields for competition, picnic facilities for larger groups, skate parks and inline rinks, large destination-style playgrounds, arboretum or nature preserves, space for special events, recreational trails, water-based recreation features, and outdoor education areas. Their service area is approximately one and one-half to three miles. Shoreline has six community parks totaling just over 61 acres.

Shoreline's Community Parks have the following service areas based on a radial distance from the park.

- Cromwell: 1 1/2 mile
- Hillwood: 1 1/2 mile
- Paramount Park: 2 miles
- Richmond Highlands: 2 miles
- Shoreline: 3 miles
- Twin Ponds: 1 1/2 mile

Total Acres Citywide: 61.12

Note: I-5 and Highway 99 are considered barriers to a park's area of service.

REGIONAL, LARGE URBAN, AND NATURAL/SPECIAL USE PARKS: LEVEL OF SERVICE

Regional Park:

Regional parks serve the city and beyond as they are usually large and often include a specific use or feature that makes them unique. Typically, their use focuses on a mixture of active and passive activities, and sometimes offers a wider range of amenities and activities. Richmond Beach Saltwater Park, consisting of 40 acres, serves as a regional park due to its functionality in providing water access to the Puget Sound.

Large Urban Park:

Generally, large urban parks provide a wide variety of specialized facilities such as sports fields, large picnic areas, etc. Their focus is on providing a mixture of active and passive recreation opportunities and serving a diversity of interests. Due to their size and the amenities offered, they require additional support facilities such as parking and restrooms. They usually exceed 50 acres, and are designed to accommodate large numbers of people within the entire community. Shoreline has two large urban parks with total acreage over 125.

Natural/Special Use Park:

This category includes areas developed to provide aesthetic relief and physical buffers from the impacts of urban development, and to offer access to natural areas for urban residents. These areas may also preserve significant natural resources, remnant landscapes, and open space. Furthermore, natural/special use areas may serve one or several specific purposes such as community gardens, waterfront access, or a variety of others.

The service area for natural/special use spaces varies according depending upon amenities and usage. Shoreline has 11 areas categorized as natural/special use which total slightly more than 100 acres.

NEIGHBORHOOD PARKS: LEVEL OF SERVICE

Neighborhood Park:

A neighborhood park is the basic unit of the park system and serves as the recreational and social focus of the neighborhood within an approximate 15 minute walking time. The overall space is designed for impromptu, informal, unsupervised active and passive recreation as well as organized recreational activities. These parks are generally small, approximately five to ten acres, and serve the neighborhood within a one-half mile radius. Since these parks are located within walking and bicycling distance of most users, the activities they offer become a daily pastime for the neighborhood residents.

Typically, amenities found in a neighborhood park include a children's playground, picnic areas, trails, open grass areas for active and passive uses, tennis courts, outdoor basketball courts, and multi-use sport fields for soccer, baseball, etc. Shoreline has five neighborhood parks totaling 21.2 acres.

Service area is 1/2 mile. Note: I-5 and Highway 99 are considered barriers to a park's area of service.

Total Acres Citywide: 21.2
