

Stormwater Treatment Options

Being Considered as Part of Project Design

Conventional Systems

- Curb and gutter
- Catch basins and conveyance pipes
- Underground detention pipes for flow control
- Stormwater treatment vaults where stormwater is held and pollutants settle out and are collected.

Natural Systems

- Vegetation used to slow down water to collect pollutants
- Reduction of impervious surfaces
- Aesthetics
- Potential reduction of large stormwater management systems
- Potential use of pervious asphalt or concrete

OR A Combination of Both
